

DAP: direct anteriors procedures

How to choose the correct shade in direct anteriors? How to isolate the upper or lower arch? How to prepare the margin? To bevel or not to bevel? How to make a silicon index? Which kind of matrix shall we use in anteriors? How to achieve a good shape? Which and how many instruments shall we use? How many burs do we need? How to understand opacities and translucencies? How to obtain high gloss?

All these questions and answers and all the DAP (direct anteriors procedure) protocol will be covered.

Gaetano Paolone

Adjunct professor in restorative Dentistry University Vita-Salute San Raffaele, Milan.

Active Member of the Italian Academy of Restorative and Conservative Dentistry (AIC), Italian Academy Esthetic Dentistry (IAED), Italian Academy Microscopic Dentistry.

Private practice in Rome. Author and co-author of articles in international journals, lecturer, Master in Esthetics and Restorative Dentistry, University of Bologna.

Author of chapters in "Endoprosthodontics" and "Moderna odontoiatria estetica

Workflow dalla A alla Z" both edited by Quintessence int. Co-founder of WeRestore.it
