

## Complete digital chairside workflow: What is possible today

Digital technologies have a great impact on our daily practice. Computers, Cameras and Scanners are used to record patient data, to analyze these information, to plan and to perform treatments. The lecture wants to give an overview of actual digital workflows helping us in diagnostics, treatment planning and fabrication and add some comments on their value for the practitioner. Do we need all these "gadgets"? A cost benefit analysis is important to find out.

### Alessandro Devigus

Born in 1962 in Sardinia, Italy.

Studies: 1981 - 1987 Zurich Dental School (Switzerland).

Since 1990 he owns a private dental practice in Bülach.
