## Endodontics

### KEY FACTORS DETERMINING THE OUTCOME OF POSTENDODONTIC RESTORATIONS

Endodontics today offers great opportunities in term of simplicity and predictability of results, with a new approach based on reduced tooth structure removal so to leave more sound dentine in the restorative section of the tooth, and still achieve ideal endodontic treatment.

There is redundant evidence stating the importance of the coronal restoration of endodontically treated teeth in order to increase the outcome.

Today's restorative dentistry on endodontically treated teeth is based on modern adhesives and modern composites; yet it has to face a number of problems that will be analyzed through the lecture: treatment plan in relationship to the remaining structure in anterior and in posterior teeth, kind of composite and adhesive in relation of the type of restoration adopted and correct behavior in cases color is an issue, what kind of material to be used in case of full coronal coverage and how to obtain the best performance.

## SIMONE GRANDINI

Prof Simone Grandini is Full professor of Endodontics and Restorative Dentistry, Director of the Department of Medical Biotechnologies and Dean of the School of Dentistry and Dental Prosthodontics at the University of Siena.

He holds a PhD from Siena University on "Basic and clinical aspects of selection and application of fiber posts". Head of Department and Chair of Endodontics, Periodontology, Paediatric and Restorative Dentistry in Siena University.

Over the last 30 years he has published more than 300 papers on international Journals, and he has given more than 1000 lectures on Endodontics and Restorative dentistry in Europe, America, Asia, Africa and Oceania. President of SIDOC (Italian Society of Conservative Dentistry), active member of IAED (Italian Academy of Esthetic Dentistry) and AIE (Italian Academy of Endodontics), academic member of SIE (Italian Society of Endodontics), IADR, he is Member of Style Italiano, Style Italiano Endodontics, founder of Style Italiano Research. Honorary Professor at the University of Hong Kong, Doctor Honoris Causa at the Carol Davila University, Bucharest.
