Restorative & Periodontics

STRATEGIES FOR DEEP DENTAL FRACTURES AND CERVICAL INVASIVE RESORPTION

Integrated surgical-restorative procedures represent a highly effective therapeutic option, particularly in cases of extensive subgingival fractures or invasive cervical resorptions.

In cases of dental trauma, restorative solutions often require a combination of adhesive techniques and surgical interventions. When a coronal fragment is available, the ideal approach is intraoperative re-bonding, combined with pulp capping and either direct or indirect restorations, following strict protocols designed to ensure optimal clinical outcomes.

For invasive cervical resorptions, advanced conservative approaches are proposed alongside the necessary surgical procedures to access the root lesions. Proper isolation of the operative field, together with precision during restoration placement, finishing, and polishing, supports the reattachment of the junctional epithelium and promotes stable tissue healing over time. Combined surgical-restorative approaches also allow for the management of "out-of-protocol" cases, opening new clinical possibilities and enabling increasingly conservative and effective treatments.

MARCO VENEZIANI

He graduated in Dentistry and Dental Prosthetics from the University of Milan in 1988 with top honors (110/110). He further specialized in Conservative Dentistry, Prosthodontics, and Periodontology, attending advanced courses in implant and mucogingival surgery. He has been an active member of the Italian Academy of Conservative and Restorative Dentistry (AIC) since 1996 and of the Italian Academy of Esthetic Dentistry (IAED) since 2012. Since 2015, he has been a member of the International Academy for Digital Dental Medicine (IADDM). He serves as a visiting professor at the Universities of Pavia, Turin, Bologna, and Humanitas University in Milan, and is a speaker at national and international courses and conferences. He is the author of numerous scientific publications and of the books *Restorative Dentistry*, *Esthetic Restorative Dentistry*, and the innovative *Solutions – Adhesive Restoration Techniques and Integrated Surgical Procedures*, translated into seven languages. He organizes theoretical and hands-on courses in restorative dentistry with a multidisciplinary approach at his educational center (MFV Communication) in Vigolzone and internationally. He has maintained a private practice in Vigolzone (PC, Italy) since 1989, offering a multidisciplinary and innovative approach.
